

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	11 July 2026
Team ID	
Project Name	Electrical Vehicle Performance & Market Analysis Dashboard
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provided a collaborative environment that encouraged every team member to contribute creative ideas for solving the project problem. During the brainstorming session, different ideas related to electric vehicle performance, pricing, charging infrastructure, vehicle range, and market trends were discussed. All ideas were collected without criticism and later organized into meaningful groups. This structured process helped the team identify the most practical and impactful ideas for developing an interactive SQL and Tableau dashboard

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team came together to discuss the scope of the project and understand the available electric vehicle datasets. Each member shared ideas regarding data cleaning, SQL preprocessing, Tableau visualization, and dashboard design. Roles were assigned based on individual strengths to ensure smooth project execution.

PROBLEM STATEMENT

How might we analyze electric vehicle performance, pricing, charging infrastructure, and market trends using SQL and Tableau so that customers, manufacturers, and policymakers can make informed, data-driven decisions?

Key Rules of Brainstorming Followed

✓ Stay on topic Every idea focused on improving EV performance analysis and market insights. ✓ Encourage wild ideas Creative dashboard designs and visualization techniques were encouraged before evaluation. ✓ Defer judgment No ideas were rejected during brainstorming. Evaluation was done only after collecting all ideas.	✓ Listen to others Each team member respected and expanded on the ideas shared by others. ✓ Go for volume The team generated many ideas before selecting the most feasible ones. Ideas were grouped into categories and represented visually for better understanding
---	---

Step-2: Brainstorm, Idea Listing

Individual Idea Listing (Idea Generation Stage)

I independently generated multiple ideas to address the project problem statement. During this stage, I explored different possible approaches without evaluating or filtering them, allowing for a broad range of creative solutions before selecting the most suitable one.

Step-3: Idea Prioritization

With the clustered ideas in hand, the team plotted each idea on an Importance-versus-Feasibility grid to agree on what mattered most and what was realistically achievable within the project timeline and available dataset.

Idea Prioritization Grid — Importance vs. Feasibility

Prioritization Summary

PLAN NEXT (High Importance, Lower Feasibility)	DO FIRST (High Importance, High Feasibility)
EV Price Prediction using Machine Learning	SQL Data Cleaning & Preparation
Battery Health Prediction	Merge Multiple EV Datasets
EV Demand Forecasting	Handle Missing Values & Data Transformation
Charging Demand Prediction	Interactive Tableau Dashboard
	EV Performance Analysis
	Charging Station Analysis
	Tableau Story Creation
	Dashboard Filters & KPI Cards

The ideas placed in the “Do First” quadrant — data cleaning and preparation, the interactive Tableau dashboard, and customer segmentation analysis — formed the core of the completed project, and were carried forward into the dataset collection, cleaning, Tableau Dashboard, Tableau Story, and Tableau Public deployment stages. The Tableau Story narrative and the responsive website/public deployment were treated as important supporting deliverables and were completed alongside the core analysis. Predictive ordering-trend modelling was consciously deferred as future scope, since it required a longer time-series dataset than was feasible for the current project.
