

Project Design Phase Solution Architecture

Date	11 July 2026
Team ID	
Project Name	Electrical Vehicle Performance & Market Analysis Dashboard
Maximum Marks	4 Marks

Solution Architecture Diagram:

The solution architecture provides a structured approach for transforming raw electric vehicle datasets into meaningful business insights. It bridges the gap between raw data and interactive analytics by integrating data collection, preprocessing, database management, visualization, and user interaction. The architecture is designed to be scalable, efficient, and user-friendly.

Its primary goals are to:

- Integrate multiple EV datasets into a centralized database.
- Clean, preprocess, and transform raw data for accurate analysis.
- Develop interactive Tableau dashboards and stories for data visualization.
- Support data-driven decision-making through meaningful insights.
- Provide a scalable architecture that can be extended with additional EV datasets and real-time information.
