

Project Performance Testing

Date	11 July 2026
Team ID	
Project Name	Electrical Vehicle Performance & Market Analysis Dashboard
Maximum Marks	4 Marks

Model Performance Testing:

S.No	Parameter	Description (Replace the Sample Text)
1	Data Rendered	The Electric Vehicle datasets were successfully imported into MySQL and connected to Tableau Public. All attributes including Brand, Model, Body Style, Top Speed, Range, Acceleration, Price, Charging Speed, Region, Latitude, and Longitude were loaded correctly and made available for visualization. 

S.No	Parameter	Description (Replace the Sample Text)
2	Data Preprocessing	Performed SQL data cleaning by removing duplicate records, handling missing values, replacing null values with average values, converting text values into numeric values, removing units such as km/h, km, sec, €, and £, validating data types, and creating calculated fields including Price Range (Lakhs), Range (Km), Top Speed (Km/h), Acceleration (Sec), Efficiency (Wh/Km), and Fast Charging Speed (Km/h).  The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'Schemas' pane with a tree view of databases including 'cheapestelectricsevedatabase', 'electriccardataclean', 'electricvehiclechargingstationist', 'evindia', 'evindia', 'Views', 'Stored Procedures', 'Functions', and 'world'. The main query editor shows a series of SQL commands: a SELECT count(*) AS Count query, a DROP TABLE command for 'cheapestelectricsevedatabase', a SELECT * FROM cheapestelectricsevedatabase query, an ALTER TABLE command to add columns Acceleration_Num (decimal(5,2)), TopSpeed_Num (INT), Range_Num (INT), Efficiency_Num (INT), and FastChargeSpeed_Num (INT), an UPDATE command to replace 'sec' with '' in the Acceleration_Num column, and a SET SQL_SAFE_UPDATES=0 command. The bottom pane shows the 'Output' tab with a table of execution results, including time, action, and message columns.
3	Utilization of Filters	Interactive Tableau filters were implemented to improve dashboard usability. Filters include Region, Brand, Body Style, Model, Price Range (Lakhs), and Range (Km). Aggregation functions such as AVG(), SUM(), COUNT(), and TOP N filtering were used to perform comparative analysis and dynamic exploration of EV performance.  The screenshot shows a Tableau dashboard titled 'Electric Car Price Comparison'. The dashboard has a 'Columns' shelf with 'Vehicle Type' and 'SUM(PriceRange(La...))', and a 'Rows' shelf with 'Car'. The 'Filters' shelf contains 'PriceRange(Lakhs)'. The 'Marks' shelf is set to 'Line'. The chart displays a line graph with 'PriceRange(Lakhs)' on the x-axis (ranging from 0 to 160) and 'Car' on the y-axis. The data points are connected by lines, showing the price range for each car model. The car models listed are Audi E-Tron, Audi E-Tron GT, BMW IX, Jaguar I-Pace, Mercedes-Benz EQC, and Porsche Taycan. The chart shows that the Audi E-Tron and Audi E-Tron GT have the highest price ranges, while the Mercedes-Benz EQC has the lowest price range.

S.No	Parameter	Description (Replace the Sample Text)
4	Calculated Fields Used	Created calculated fields including Price Range (Lakhs), Acceleration (Sec), Range (Km), Top Speed (Km/h), Efficiency (Wh/Km), and FastCharge Speed (Km/h). These calculated fields improve readability and enable accurate visualization. SQL functions like REPLACE(), AVG(), CASE, and Tableau calculated fields were used during preprocessing and dashboard creation.
5	Dashboard Design	Designed an interactive Tableau dashboard containing multiple visualizations such as Average Top Speed by Brand & Body Style, Charging Stations by Region, Top 10 EV Models by Maximum Top Speed, Acceleration Distribution by Body Style, Electric Vehicle Price Comparison, and Average Driving Range by Brand. Interactive filters allow users to analyze EV performance from different perspectives. 
6	Story Design	Developed a Tableau Story consisting of multiple story points that explain the project workflow from charging infrastructure analysis to vehicle performance, acceleration, price comparison, top-speed analysis, and final dashboard insights. The story presents the analysis in a logical sequence for better understanding and decision-making.
